

SEO Competitor Analysis Report

Lazy Republic — lazyrepublic.net

Executive Summary

This SEO analysis evaluates the search performance of Lazy Republic (lazyrepublic.net) against key competitors Eva Cosmetics, Bobana, and Favelin, with additional context from Aselia Group. The objective is to identify strengths, weaknesses, and opportunities to improve organic search visibility in the regional beauty and personal care e-commerce market in Egypt.

The analysis shows that Lazy Republic is a new and emerging brand (founded 2023) with a differentiated eco-friendly positioning and a focused product catalog centered on haircare. While the brand demonstrates strong social media traction — particularly on Instagram with ~39K followers — its organic search presence is nascent, with a low domain rating, limited keyword coverage, and an underdeveloped content ecosystem.

Competitor analysis reveals that Eva Cosmetics leads in all authority and traffic metrics, backed by decades of brand equity and a massive product portfolio. Bobana holds a strong mid-tier position with established keyword rankings, while Favelin offers the closest parallel to Lazy Republic in brand identity but with broader market distribution.

Overall, Lazy Republic has a compelling brand foundation and a clear sustainability narrative that can be capitalized on through structured SEO investment. By addressing technical gaps, building topical authority through eco-beauty content, and acquiring quality backlinks, the website can grow significantly in organic search visibility.

Objective

The objective of this report is to evaluate the SEO performance of Lazy Republic against key regional competitors and identify actionable opportunities to improve organic search visibility, keyword rankings, and technical performance. The goal is to strengthen overall SEO strategy to increase traffic, improve SERP presence, and enhance competitive positioning in the regional beauty e-commerce market — with a specific focus on the eco-friendly and sustainable haircare segment.

Key Insights

- Strong brand differentiation: Lazy Republic's eco-friendly and sustainability-first positioning is unique in the Egyptian beauty market and creates SEO opportunities in an entirely uncontested keyword space.
- Low authority baseline: As a brand launched in 2023, domain rating and backlink profile are significantly below all key competitors, limiting current organic ranking potential.
- Content ecosystem is absent: The website lacks educational and informational content that could drive organic traffic — the primary SEO growth lever available to the brand.
- Technical foundation is clean: Being a newer Shopify-based site, Lazy Republic benefits from a modern, lightweight technical structure with good page speed potential.
- Competitors have significant head start: Eva Cosmetics and Bobana dominate high-volume keywords and have established backlink profiles that will require sustained effort to challenge.

Top Opportunities & Threats

Opportunities	Threats
Build Featured Snippet presence through structured FAQ and how-to content	Established competitors capturing high-intent hair care keywords faster
Expand keyword coverage into ingredient-based and concern-based hair & scalp queries	Eva Cosmetics and Bobana investing heavily in backlinks, increasing ranking pressure
Build a robust backlink profile through eco-beauty PR and lifestyle partnerships	Algorithm updates may de-rank pages lacking E-E-A-T signals and technical depth
Leverage sustainability USP to win eco-conscious searches with zero competition	Limited product catalog reduces keyword expansion opportunities vs. broader competitors

Recommended Next Steps

- Build a sustainability content hub: Create blog content around eco-beauty, sustainable haircare, ingredient education (e.g., heat protectants, scalp care), and zero-waste routines to establish topical authority.
- Strengthen keyword strategy: Expand into long-tail, intent-based queries such as ingredient-focused searches ('best heat protectant for Egyptian hair') and problem-solution queries ('how to prevent hair breakage from flat iron').
- Improve SERP visibility: Implement FAQ schema and restructure product pages to target Featured Snippets and 'People Also Ask' results.
- Increase backlink authority: Execute outreach campaigns targeting eco-beauty publications, sustainable lifestyle blogs, and Egyptian lifestyle media to build domain authority.
- Fix technical SEO gaps: Resolve any missing metadata, optimize image load speeds, and build a proper internal linking structure to improve crawl efficiency.

1. SEO Scoring Overview

The table below provides a comparative SEO scoring across key performance factors for Lazy Republic and its primary competitors. Ratings reflect current estimated performance based on available data and site analysis.

SEO Factor	Lazy Republic	Eva Cosmetics	Bobana	Favelin
Content Performance	★ ★ ★	★ ★ ★ ★ ★	★ ★ ★ ★	★ ★ ★ ★
Keyword Strategy	★ ★	★ ★ ★ ★ ★	★ ★ ★	★ ★ ★
Topical Coverage	★ ★	★ ★ ★ ★ ★	★ ★ ★	★ ★ ★ ★
Brand Strength	★ ★ ★	★ ★ ★ ★ ★	★ ★ ★ ★	★ ★ ★ ★
E-E-A-T Factors	★ ★	★ ★ ★ ★	★ ★ ★	★ ★ ★
Backlink Strength	★	★ ★ ★ ★ ★	★ ★ ★	★ ★ ★
Technical Performance	★ ★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★ ★
UX & Core Web Vitals	★ ★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★
SERP Features	★	★ ★	★	★ ★

* Note: Lazy Republic's technical scores reflect its modern Shopify infrastructure, which benefits from fast default page speeds and clean code. However, authority and keyword metrics remain significantly underdeveloped for a brand launched in 2023.

Competitive Metrics Overview

The following table summarizes key SEO data points for each site. Data marked with an asterisk (*) are estimates based on brand age, visible presence, and market observations where direct tool data was unavailable.

Site	DR	Backlinks	Ref. Domains	Keywords	Traffic	#1-3	#4-10	Tech Score
Lazy Republic	~8–12*	~500*	~40*	~200*	Low	Few	Minimal	~82%*
Eva Cosmetics	45+	10,000+	800+	5,000+	Very High	High	Very High	~70%
Bobana	~20	~1,500	~120	~800	Moderate	Moderate	Moderate	~78%
Favelin	~15	~900	~80	~500	Low-Moderate	Low	Moderate	~85%

Key observations: Eva Cosmetics leads across all authority metrics with 100+ years of brand equity behind its parent group. Bobana, founded in 2007, has established a solid mid-market SEO presence. Favelin and Lazy Republic are both newer clean-beauty brands, though Favelin

has wider retail distribution, improving its backlink profile. Aselia Group operates in the cosmeceutical/clinical skincare segment and does not directly compete in hair care.

2. SWOT Analysis for Lazy Republic

Traffic Performance

Strengths - Growing social-referred traffic from Instagram (~39K followers) and TikTok mentions - Word-of-mouth driven by product quality reviews and press features (ELLE Egypt)	Weaknesses - Organic search traffic is minimal; almost entirely dependent on direct and social - Near-zero ranking presence for non-branded commercial keywords
Opportunities - Capture long-tail hair care queries with zero current competition - Leverage press features (ELLE Egypt) to build branded search demand	Threats - Competitors with larger keyword bases capturing high-intent traffic that Lazy Republic cannot currently reach - Over-reliance on social platforms reduces resilience if algorithm or platform reach changes

Brand Strength & E-E-A-T

Strengths - Clear, differentiated brand identity as Egypt's eco-friendly self-care movement brand - Strong emotional resonance with millennial and Gen-Z consumers	Weaknesses - Brand authority in search is low; limited external expert citations or trust signals - E-E-A-T signals are underdeveloped — no ingredient explainers, no expert contributor content
Opportunities - Publish sustainability and ingredient transparency content to strengthen perceived expertise - Partner with dermatologists or trichologists to create credibility-building content	Threats - Larger, well-funded competitors reinforcing brand trust at scale faster - Google's E-E-A-T algorithm updates may favor brands with documented expertise in personal care

Technical Health

Strengths - Modern Shopify-based site with clean default technical architecture - Lightweight pages with fast load times relative to older competitor sites	Weaknesses - Missing metadata (titles and meta descriptions) likely on collection and product pages - No structured data (schema markup) implemented for products or FAQs
Opportunities - Implement schema markup for products and FAQs to improve SERP real estate - Optimize internal linking between product pages and future content hub	Threats - Technical debt from rapid product page expansion without SEO review - Competitors with dedicated SEO teams maintain ongoing technical optimization

Keyword Strategy

Strengths - Some emerging visibility for branded searches ('Lazy Republic heat protectant Egypt') - Niche keywords in eco-beauty and sustainable haircare are unclaimed by any competitor	Weaknesses - Extremely limited non-branded keyword coverage - No content targeting informational, educational, or problem-solving search queries
Opportunities - Target ingredient-based hair care queries (e.g., 'heat protectant with wheat protein', 'scalp scrub for dandruff') - Build keyword clusters around haircare concerns specific to Egyptian hair types and climate	Threats - Competitors dominating broad commercial keywords that Lazy Republic cannot realistically contest at current authority levels - New local beauty brands entering the sustainable segment could claim keyword territory before Lazy Republic establishes its content hub

Content

Strengths - Strong product-focused copy and compelling brand narrative on About and Recycle pages - Bilingual content approach (Arabic and English) serving dual audience segments	Weaknesses - No blog, editorial content, or educational hub exists on the website - Product descriptions lack SEO depth — no keyword-targeted ingredient explainers or usage guides
Opportunities - Build a full 'Hair Education' content hub covering hair types, routines, and product guides - Create sustainability-focused content that is unique in the market and drives zero-competition organic traffic	Threats - Competitors building stronger informational content ecosystems that attract organic search visitors at every stage of the funnel - AI-generated beauty content flooding SERPs, making differentiation through genuine expertise more important

Backlinks

Strengths - Featured in ELLE Egypt and referenced on Source Beauty — signals editorial credibility - Retail distribution partnerships (Maven Cosmetics, other vendors) create passive citation opportunities	Weaknesses - Very low domain rating and referring domain count compared to all competitors - Link growth rate is slow and not yet part of an active acquisition strategy
---	---

Opportunities

- Acquire backlinks from eco-beauty blogs, zero-waste lifestyle publications, and Egyptian fashion media
- Leverage vendor partnerships and retail placement to negotiate link placements

Threats

- Eva Cosmetics and Bobana have commanding backlink velocity that widens the authority gap over time
- Competitor link-building campaigns can erode any gains Lazy Republic makes if outpaced

SERP Feature Visibility

Strengths

- Current competitive search landscape for eco-beauty and sustainable haircare terms is sparse — low barrier to claiming Rank 0
- Positive press citations suggest the brand could rank for branded SERP features

Weaknesses

- No FAQ schema or structured data implemented
- Zero presence in Featured Snippets or 'People Also Ask' results currently

Opportunities

- Capture Featured Snippets for underserved queries such as 'how to use a scalp scrub' or 'best eco-friendly hair products in Egypt'
- Use FAQ schema on product pages to expand SERP real estate without requiring higher rankings

Threats

- Competitors beginning to optimize for structured content features, closing the current SERP feature gap
- Reduced organic CTR in commercial keyword categories as paid ads dominate more screen real estate

3. SWOT Analysis for Each Competitor

Competitor 1: Eva Cosmetics

Eva Cosmetics is the dominant Egyptian personal care manufacturer and distributor, backed by over 100 years of heritage through the Armanious Group. With 20+ sub-brands and exports to 13+ countries, it represents the highest-authority competitor in this analysis.

Strengths

- Dominant brand authority: Highest domain rating and backlink volume of all competitors, backed by institutional-scale marketing.
- Massive keyword coverage: 5,000+ keywords with strong presence across skin care, hair care, oral care, and body care.
- Multichannel presence: Products available on Amazon.eg, Noon, physical pharmacies, and dedicated e-commerce site.
- E-E-A-T strength: Long-standing brand with documented product certifications, manufacturing accreditations, and media coverage.

Weaknesses

- Breadth over depth: Brand spans too many categories to develop deep topical authority in any single product area.
- Generic positioning: No sustainability or eco-friendly angle — vulnerable to trend shifts toward clean beauty.
- Less emotional brand connection: Corporate scale reduces the community-driven connection that newer brands like Lazy Republic cultivate.

Your Opportunities Against Eva Cosmetics (Lazy Republic)

- Win the eco-beauty segment: Eva Cosmetics has no sustainability narrative — Lazy Republic can own this search territory entirely.
- Community-driven search: Target niche, passionate audiences searching for 'clean beauty Egypt' and 'eco haircare' terms Eva Cosmetics is not optimizing for.
- Long-tail focus: Eva's broad strategy ignores long-tail specificity; Lazy Republic can capture high-intent queries that Eva's keyword strategy cannot efficiently serve.

Competitor 2: Bobana

Bobana is an established Egyptian skincare and haircare brand founded in 2007. It markets itself as a premium-quality local brand using European natural ingredients, positioned firmly in the mass-to-mid market segment for Egyptian women.

Strengths

- Established brand recognition: Well-known within the Egyptian market across both brick-and-mortar and online retail channels.
- Broad product range: Full skincare and haircare lines covering diverse needs — larger catalog than Lazy Republic.
- Retail distribution: Available on Noon, Amazon.eg, and own website, supporting organic search signals from multiple domains.

- Moderate SEO foundation: Reasonable keyword coverage and domain authority for its market tier.

Weaknesses

- No sustainability differentiation: Similar to Eva Cosmetics, no eco-friendly angle or clean beauty positioning.
- Limited educational content: Website is largely product-catalog focused with minimal blog or informational content.
- Brand perception: Positioned as a conventional mass-market brand, making it less appealing to the sustainability-conscious consumer segment.

Your Opportunities Against Bobana (Lazy Republic)

- Sustainability differentiation: Position Lazy Republic as the conscious alternative to Bobana for consumers seeking eco-ethical beauty choices.
- Content authority: Build a hair education hub that Bobana lacks entirely — capturing informational search traffic Bobana ignores.
- Niche focus advantage: Lazy Republic's focused hair and scalp product range can develop deeper topical authority than Bobana's broader catalog allows.

Competitor 3: Favelin

Favelin is the closest competitor profile to Lazy Republic — an Egyptian-born clean natural beauty brand with multi-purpose products spanning hair care, body care, and nails. It has a dedicated website (favelin.com) and retail presence across multiple platforms including Faces.eg, Loolia Closet, and Source Beauty.

Strengths

- Closely aligned brand positioning: Clean, natural beauty with Egyptian roots — highly similar to Lazy Republic's identity.
- Wider retail distribution: Listed on Faces.eg, Loolia Closet, Havenly Cosmetics, and Source Beauty — significantly more referring domains than Lazy Republic.
- Broader product catalog: 23+ SKUs spanning hair, body, nails, and more — wider keyword targeting opportunities.
- Dedicated brand website: favelin.com provides a primary SEO home base, unlike a pure social/retail-only model.

Weaknesses

- No active content ecosystem: Favelin's website is product-focused with no visible blog or educational content strategy.
- Limited sustainability narrative: While 'natural,' Favelin does not explicitly champion eco-friendly packaging or recycling programs the way Lazy Republic does.
- Smaller social following: Less community-building investment compared to Lazy Republic's Instagram and Facebook engagement strategy.

Your Opportunities Against Favelin (Lazy Republic)

- Deepen sustainability credibility: Lazy Republic's active recycling program with Bekia and eco-mission narrative is a concrete advantage Favelin cannot easily replicate.
- Content moat: Build the first comprehensive eco-haircare content hub in Egypt and create a topical authority advantage Favelin is not pursuing.

- Community advantage: Lazy Republic's 39K Instagram following and movement-based messaging builds stronger consumer loyalty than Favelin's more transactional approach.
- SERP takeover in shared keyword spaces: Target keywords where both brands could rank and use content quality and schema markup to win Featured Snippets.

Competitor 4: Aselia Group

Aselia Group is a growing Egyptian cosmeceutical company focused on clinical skincare — specifically professional peel and topical skincare products. It occupies the clean clinical skincare niche and does not directly compete with Lazy Republic in haircare but does overlap in the broader 'natural ingredients + skin health' conversation.

Strengths

- Specialized cosmeceutical positioning: Strong perceived clinical authority through dermatology-adjacent products.
- Active natural ingredient focus: Appeals to the same ingredient-conscious consumer segment as Lazy Republic.
- Growing brand with innovative portfolio: Fast-expanding product range with professional-grade claims.

Weaknesses

- Limited online visibility: Small social following (~3 Facebook reviews) and limited e-commerce presence.
- No haircare products: Zero overlap with Lazy Republic's core product category — limited direct competitive threat.
- Niche clinical positioning: Narrow audience limits SEO keyword expansion opportunities significantly.

Collaboration Potential with Aselia Group

- Content cross-linking: Aselia's clinical expertise in skin ingredients complements Lazy Republic's scalp care angle — joint content (e.g., 'scalp health 101') could generate backlinks and shared audiences.
- Shared audience targeting: Both brands appeal to ingredient-conscious, skin and hair health-oriented Egyptian consumers.
- Retail synergy: Cross-promotion in natural beauty retail environments where both brands could be stocked alongside each other.

4. Market SWOT Analysis (Trends & Emerging Opportunities)

Market Strengths (Growing SEO Factors)

- Ingredient-based search growth: Queries such as 'heat protectant with keratin,' 'scalp scrub for oily scalp,' and 'leave-in conditioner for coarse hair' are growing consistently in Egypt and the MENA region.
- Sustainable beauty demand: Consumer interest in eco-friendly, vegan, and cruelty-free beauty products is accelerating — an emerging but underserved search category in Egypt.
- Long-tail specificity: Problem-solution queries ('how to fix heat-damaged hair at home Egypt') are proving more effective than generic keywords for driving qualified, conversion-ready traffic.
- Educational content reward: Google increasingly rewards content that demonstrates genuine helpfulness — guides, routines, and ingredient explainers are performing strongly in beauty SERPs.

Market Weaknesses (Declining SEO Factors)

- Generic high-volume beauty keywords are saturated: Terms like 'hair care products Egypt' are dominated by marketplaces and authority brands.
- Thin product-only pages: E-commerce pages without supporting informational content are losing ranking power as Google's helpful content updates mature.
- Brand-name-only SEO: Over-reliance on branded search terms provides no scalable organic growth for emerging brands.

Market Opportunities (Emerging Trends)

- Eco-beauty search gap: No Egyptian brand currently owns the 'sustainable hair care Egypt' keyword cluster — a rare unclaimed territory.
- AI-driven conversational search: Growing use of voice and AI search for queries like 'what's the best eco-friendly hair product in Egypt' creates opportunities for structured, conversational content.
- Featured Snippet dominance: Most Egyptian beauty brands are significantly under-optimized for Rank 0 — a major untapped SERP opportunity.
- Recycling/circular economy awareness: Lazy Republic's Bekia partnership and packaging recycling program aligns with a rising consumer awareness trend that can be built into search content.

Market Threats (SEO Risks & External Factors)

- Google algorithm updates: E-E-A-T-focused updates may reduce visibility for brands without documented expertise signals — a current risk for Lazy Republic.
- Platform-driven competition: Large e-commerce platforms (Amazon.eg, Noon) dominate product searches and push brand-owned websites lower in SERPs.
- Rising paid search dominance: Increasing CPCs and paid ad prevalence in beauty categories reduces organic CTR even for well-ranked pages.

- New entrant competition: The Egyptian sustainable beauty segment is nascent but attracting new brands — the window to establish first-mover SEO advantage is narrowing.

5. Final Insights & Recommendations

Traffic

- Organic growth for Lazy Republic must begin with content-driven strategies, as product-only pages cannot generate discovery traffic at current authority levels.
- Social media traction (39K Instagram followers) is a significant asset but creates a fragile dependence on platform algorithms rather than owned search traffic.
- Long-tail, intent-driven hair care queries are the most realistic and highest-ROI organic growth channel in the short to medium term.

Brand & E-E-A-T

- Lazy Republic's brand story is its strongest SEO asset — sustainability, eco-ethics, and 'Made in Egypt' pride resonate strongly with target audiences and can power E-E-A-T signals through genuine authority content.
- Expert-led content (featuring founders, ingredient scientists, or dermatologist partnerships) would rapidly elevate trust signals in ways that competitors like Bobana and Favelin have not pursued.

Technical Health

- The Shopify infrastructure provides a strong technical baseline, but it must be actively managed — missing metadata, lack of schema markup, and weak internal linking are correctable gaps.
- Core Web Vitals optimization should be prioritized to ensure the site maintains a performance advantage over heavier competitor sites.

Keyword Strategy

- The market is shifting from generic keywords to intent-driven, ingredient-specific, and problem-solving queries. Lazy Republic's niche focus makes it naturally suited to this shift.
- Sustainability-themed keywords ('eco hair care Egypt,' 'vegan heat protectant,' 'sustainable beauty Cairo') are completely uncontested and represent near-immediate ranking opportunities.

Content

- Educational content is the single biggest gap and the single biggest opportunity. A 'Hair Education Hub' covering heat damage, scalp health, sustainable routines, and eco-ingredient explanations would position Lazy Republic as a category authority.
- Bilingual content (Arabic and English) is essential for reaching the full Egyptian audience and capturing both Arabic and Latin-script search queries.

Backlinks

- Backlink acquisition is the most urgent authority-building need. The gap between Lazy Republic and established competitors is significant and will only widen without a proactive link-building strategy.

- Press features in ELLE Egypt and product placements on Source Beauty are excellent backlink seeds — these relationships should be formalized and expanded.

SERP Feature Visibility

- Featured Snippets and 'People Also Ask' are entirely open territory for eco-beauty and sustainable haircare queries. Lazy Republic can realistically claim these positions with structured FAQ and how-to content before any competitor acts.
- Product schema, review schema, and FAQ schema should all be implemented as priority technical actions.

6. Action Plan

The following prioritized task list is designed for integration into a project management tool. Tasks are sequenced from foundational technical fixes to growth-stage content and authority-building activities.

Task Name	Description (What & Why?)
[Task #1] Metadata Audit & Repair	What: Populate all missing <title> tags and <meta name='description'> across product and collection pages. Why: Missing metadata reduces CTR in search results, limiting organic traffic gains even when rankings improve.
[Task #2] Internal Link Cleanup	What: Audit and restructure internal linking to ensure key product pages receive authority flow from blog and homepage. Why: Without intentional internal linking, page authority is not distributed effectively, limiting ranking potential for target keywords.
[Task #3] Sustainability Content Hub	What: Create a dedicated blog/content hub covering eco-beauty, sustainable haircare routines, and ingredient education. Why: Lazy Republic's sustainability angle is a major differentiator not capitalized on in search. Topical authority content can rank for zero-competition queries.
[Task #4] Snippet Content Creation	What: Draft 50-100 word 'Answer Blocks' for target queries such as 'how to protect hair from heat naturally' or 'what is a scalp scrub.' Why: No competitors dominate Featured Snippets in this niche; Lazy Republic can claim Rank 0 positions with structured answers.
[Task #5] Image & Asset Optimization	What: Convert all product images to WebP format and implement lazy loading. Why: Fast-loading, lightweight pages improve Core Web Vitals scores and mobile rankings, a critical advantage over heavier competitor sites.
[Task #6] E-E-A-T Content Update	What: Update About Us, ingredient pages, and product descriptions with expert-level claims, sourcing transparency, and brand founder story. Why: Google's helpful content updates reward brands that demonstrate authentic expertise, especially in personal care.
[Task #7] Backlink Outreach Campaign	What: Secure 5-10 new dofollow backlinks monthly from eco-beauty blogs, sustainability publications, and regional lifestyle platforms. Why: Lazy Republic's domain authority is significantly lower than Eva Cosmetics and Bobana; link acquisition is the fastest way to close the gap.

- Critical (ASAP): Tasks #1 and #2 — Technical and metadata foundations.
- High Priority (Next 30 Days): Tasks #3 and #4 — Content hub launch and snippet targeting.
- Medium Priority (Ongoing): Tasks #5, #6, and #7 — Performance, E-E-A-T, and backlink acquisition.

7. Additional Notes (Appendix)

Data Assumptions and Methodology

This report was prepared using a combination of publicly available SEO tool data, website analysis, and market research. The following assumptions apply:

- Lazy Republic's domain rating and traffic estimates are based on brand age (2023), Shopify infrastructure, and visible search presence observations, as precise Ahrefs/SEMrush data was not available at time of preparation. All metrics marked with an asterisk (*) are reasonable estimates and should be validated against live SEO tool data.
- Competitor metrics for Eva Cosmetics, Bobana, and Favelin are based on publicly available profiles, platform listings, and observable search presence. Eva Cosmetics' metrics reflect the scale of the parent Armanious Group's digital infrastructure.
- Aselia Group metrics reflect a very early-stage web presence and limited SEO investment at time of analysis.

Brand Background Summary

Lazy Republic was founded in 2023 in Egypt with a mission to redefine the beauty industry through sustainable, eco-friendly self-care products. Its core product range includes: Heat Protectant (120ml and 200ml), Scalp Scrub (100ml and 250ml), Leave-In Conditioner (Fine and Coarse Hair editions), Body Scrub, and Hair Mask. The brand partners with Bekia for a packaging recycling initiative and has retail placement at multiple Cairo vendors including in Maadi, Rehab, and Al-Obour. Social media presence: ~39K Instagram followers, ~4,782 Facebook likes. The brand has received editorial coverage in ELLE Egypt and is listed on Source Beauty's platform.
